FIG. 11

FIG. 12

- 1 /\* simplified algorithm for an adaptive focus GUI \*/
- 2 Receive an incoming situation change event
- 3 Adapt to the new situation, using stores of adaptive knowledge

7/25

FIG. 13

FIG. 14

- 1 /\* simplified algorithm for Adaptive Response Manager \*/
- 2 Receive situation change event
- 3 Perform loss of focus actions for current work situation
  - 4 - focus loss manager performs cleanup operations
  - 5 - focus loss manager performs logging and other operations
- 6 Derive a full situation change description from the change event
- 7 Install the new full situation change, thereby adapting the GUI
- 8 to the incoming situation change event; do focus gain actions
- 9 Redisplay the newly adapted GUI layout

8/25

FIG. 15

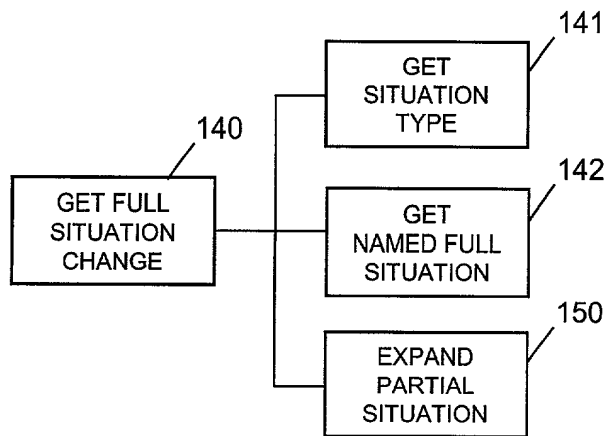

FIG. 16

- 1 /\* simplified algorithm for Get Full Situation Change \*/
- 2 Obtain change event type from incoming change ev
- 3 If sit change event type = full situation change
- 4     Get full situation definition from situation name table
- 5 Else if sit change event type = partial situation change
- 6     Expand partial situation into full situation according to
- 7         current partial situation expansion policy.
- 8 Return a full work situation description to caller.

9/25
